The authors would like to correct a few errors in labeling that crept into the above-mentioned paper. Although the changes are minor and do not change the paper substantively, they feel that the interest generated by the paper warrants these corrections.

- Some of the column headings in Tables 3 and 4 have been inadvertently truncated and should follow those listed in Table 2, for example; in Table 3 the 2DMC4 should be 22DMC4.
- The 23DMC4 (marked as 3DMC4) and 2MC5 columns in Table 3 should be interchanged.
- Six references to dimethylcyclohexane on page 1150 and the 1t3CMCYC6 and 1t2DMCYC6 labels in Fig. 13 should all be changed to dimethylcyclopentane.
- In the center of the left column on page 1139, the sentence “The samples Lousana and Rainbow....” should be replaced with “The Rainbow samples (619 and 623) are notable exceptions where n-heptane (14.1%) is dominant over methyloclohexane (8.3 and 9.9%).”

The authors apologize for any confusion arising from this mislabeling and would particularly like to thank Allen Young for his keen eye and help in identifying the offenders.
